SUMMARY

Motivated software developer with experience in cloud-native applications, and building CI-CD pipelines. Proficient in multiple programming languages and frameworks, with experience in teaching and mentoring. Effective in collaborative environments and taking community initiatives.

SKILLS

Languages: Java, Python, C/C++, SQL (MySQL), JavaScript, TypeScript, Swift

Frameworks and Tools: React, Node.js, Angular, Kubernetes, Git, Docker, Google Cloud Platform (GCP), Amazon Web Services (AWS), Microsoft Azure, Snyk, Dynatrace, Cloud Foundry, Linux

EDUCATION

New York University

Master of Science in Computer Engineering

New York, USA

Sep. 2024 – May 2026

Shiv Nadar University

Bachelor of Technology in Computer Science and Engineering

Delhi-NCR, India

Aug. 2020 – May 2024

EXPERIENCE

Software Engineer Intern

Dell Technologies

May 2023 – May 2024

Bengaluru, India

- Built and modernized 3 internal cloud-native applications, enhancing security and modularity, resulting in a **30% reduction in load times as reported in Dynatrace**.
- Implemented OAuth2 with JWT tokens to authorize usage of microservices, preventing unauthorized requests from accessing the services and **reducing unauthorized access attempts by 35%**.
- Reduced application vulnerabilities reported by Snyk by at least 50% and reached internal **DevOps maturity score of over 90%** by fixing broken CI-CD pipelines and migrating deprecated Angular applications to use the latest version, related APIs, and dependencies.

Teaching Assistant

Shiv Nadar University

Jan 2023 – April 2023

Delhi-NCR, India

- Supported the professor in preparing and conducting lectures and assignments for the Operating Systems class, ensuring efficient course delivery and the smooth conduct of **12 graded assignments and 2 exams**.
- Conducted 12 lab sessions and assisted 130 students** with complex concepts such as memory management and process scheduling.

PROJECTS

Kabootar | *React, TypeScript, Golang, Docker* | *Peer-to-Peer File Sharing* — kabootar.meghrathod.dev

- Leveraged WebRTC and optimized APIs to enable fast and secure real-time file transfers, deploying it as a containerized progressive web application (PWA), benefiting **over 200 monthly active users** within my class and university community.
- Developed a Golang-based signalling protocol using WebSockets to facilitate seamless peer discovery and connection management in a P2P file-sharing environment.

Friday | *Python, React, JavaScript, MySQL* | *Automated Code Checking* — friday.meghrathod.dev

- Designed and deployed a grading utility for projects in Java, C++, and Python, streamlining the evaluation process of 130 project submissions and **reducing manual grading time by over 40 hours**.
- Implemented a responsive user interface for teachers to analyze individual and collective student reports, enhancing grading efficiency and clarity.
- Designed a modular architecture allowing future integration of features like plagiarism detection and support for additional programming languages.

chatX | *Java, Servlets* | *Communication framework* — chatx.meghrathod.dev

- Developed a concurrent and multi-threaded communication framework using sockets for tasks such as file streaming, project management software, and task automation, **supporting over 50 simultaneous users**.
- Utilized object-oriented design principles to create a reusable and scalable framework, enhancing maintainability and future development.
