SUMMARY

Motivated software developer with experience in cloud-native applications, and building CI-CD pipelines. Proficient in various programming languages and frameworks, with a background in teaching and mentoring. Effective in collaborative environments and building community initiatives.

EDUCATION

New York University

Master of Science in Computer Engineering

New York, USA

Sep. 2024 – May 2026

Shiv Nadar University

Bachelor of Technology in Computer Science and Engineering

Delhi-NCR, India

Aug. 2020 – May 2024

EXPERIENCE

Software Engineer Intern

Dell Technologies

May 2023 – May 2024

Bengaluru, India

- Built and modernized 3 internal cloud-native applications, enhancing security and modularity, resulting in a 30% reduction in load times as reported in Dynatrace.
- Implemented OAuth2 to secure microservices and reduce unauthorized access attempts by 35%.
- Reduced application vulnerabilities reported by Snyk by at least 50% and reached internal DevOps maturity score of over 90% by fixing broken CI-CD pipelines and migrating deprecated Angular application to use the latest version, related APIs and dependencies.

Teaching Assistant

Shiv Nadar University

Jan 2023 – April 2023

Delhi-NCR, India

- Supported the professor in preparing and conducting lectures and assignments for the Operating Systems class, ensuring efficient course delivery and the smooth conduct of 12 graded assignments and 2 exams.
- Conducted 12 labs and assisted 130 students with complex concepts such as memory management and process scheduling.

PROJECTS

Kabootar | *React, TypeScript, Golang, Docker* | *Peer-to-Peer File Sharing* — kabootar.meghrathod.dev

- Leveraged WebRTC and optimized APIs to enable fast and secure real-time file transfers, and deployed it as a containerized progressive web application (PWA), benefiting over 200 monthly active users within my class and university community.
- Developed a Golang-based signalling protocol using WebSockets to facilitate seamless peer discovery and connection management in a P2P file-sharing environment.

Friday | *Python, React, JavaScript, MySQL* | *Automated Code Checking* — friday.meghrathod.dev

- Designed and deployed a grading utility for projects in Java, C++, and Python, streamlining the evaluation process of 130 project submissions and cutting manual grading time by more than 40 hours.
- Implemented a responsive user interface for teachers to analyze individual and collective student reports, enhancing grading efficiency and clarity.
- Designed a modular architecture allowing future integration of features like plagiarism detection and support for additional programming languages.

chatX | *Java, Servlets* | *Communication framework* — chatx.meghrathod.dev

- Developed a concurrent and multi-threaded communication framework using sockets to be utilized for tasks like filestreaming, project management software, and task automation supporting 50+ simultaneous users.
- Utilized object-oriented design principles to create a reusable and scalable framework, enhancing maintainability and future development.

SKILLS

Languages: Java, Python, C/C++, SQL (MySQL), JavaScript, TypeScript

Frameworks and Tools: React, Node.js, Angular, Kubernetes, Git, Docker, Google Cloud Platform (GCP), Amazon Web Services (AWS), Microsoft Azure, Snyk, Dynatrace, Cloud Foundry
